

Village Water Filters Inc.

1. Separate two ends of prefilter housing by turning counter clockwise.
2. Remove fabric mesh and rinse completely.
3. Replace fabric by cramming it into the small end of the filter housing. Do not fold or wrap the fabric as it will create channels that will allow water to bypass the filter mesh.
4. Reassemble two ends of housing.

Note: Only the prefilter can be separated and cleaned. The .1 micron final filter is permanently sealed and cannot be separated. It can only be cleaned by back flushing.
